Claims

What is claimed is:

- 5 1. An isolated polypeptide having aminopeptidase activity, selected from the group consisting of:
 - (a) a polypeptide having an amino acid sequence which has at least 50% identity with the amino acid sequence of SEQ ID NO:2;
 - (b) a polypeptide which is encoded by a nucleic acid sequence which hybridizes under medium stringency conditions with (i) the nucleic acid sequence of SEQ ID NO:1, (ii) its complementary strand, or (iii) a subsequence of SEQ ID NO:1 which encodes a polypeptide fragment which has aminopeptidase activity;
 - (c) an alielic variant of (a) or (b);
 - (d) a fragment of (a), (b), or (c), wherein the fragment has aminopeptidase activity; and
 - (e) a polypeptide having aminopeptidase activity with physicochemical properties of (i) a pH optimum in the range of from about pH 7.27 to about pH 10.95 determined at ambient temperature in the presence of Ala-para-nitroanilide; (ii) a temperature stability of 90% or more, relative to initial activity, at pH 7.5 determined after incubation for 20 minutes at 60°C in the absence of substrate; and (iii) an activity towards Xaa-para-nitroanilide wherein Xaa is selected from the group consisting of Leu, Glu, Gly, Ala, and Pro.
 - 2. The polypeptide of claim 1, comprising an amino acid sequence which has at least 50% identity with the amino acid sequence of SEQ ID NO:2.
 - 3. The polypeptide of claim 2, comprising an amino acid sequence which has at least 60% identity with the amino acid sequence of SEQ II NO:2.
 - 4. The polypeptide of claim 3, comprising an amino acid sequence which has at least 70% identity with the amino acid sequence of SEQ ID NO:2.
 - 5. The polypeptide of claim 4, comprising an amino acid sequence which has at least 80% identity with the amino acid sequence of SEQ ID NO:2.
 - 6. The polypeptide of claim 5, comprising an amino acid sequence which has at least 90% identity with the amino acid sequence of SEQ ID NO:2.
 - 7. The polypeptide of claim 1, comprising the amino acid sequence of SEQ ID NO:2 or a fragment thereof.

10

- 8. The polypeptide of claim 7, comprising the amino acid sequence of SEQ D NO:2.
- 9. The polypeptide of claim 2, which is obtained from aa Aspergillus strain.
- 10. The polypeptide of claim 9, which is obtained from an Aspergiflus oryzae strain.
- 11. The polypeptide of claim 1, which is encoded by a nucleic acid sequence which hybridizes under medium stringency conditions with (i) the nucleic acid sequence of SEQ ID NO:1, or its complementary strand, or a subsequence thereof which encodes a polypeptide fragment which has aminopeptidase activity.
- 12. The polypeptide of claim 11, which is encoded by a nucleic acid sequence which hybridizes under medium stringency conditions with (i) the nucleic acid sequence of SEQ ID NO:1 or its complementary strand.
- 13. The polypeptide of claim 11, which is obtained from an Aspergillus strain.
- 14. The polypeptide of claim 13, which is obtained from an Aspergillus oryzae strain.
- 15. The polypeptide of claim 1, which is encoded by a nucleic acid sequence which hybridizes under high stringency conditions with (i) the nucleic acid sequence of SEQ ID NO:1, or its complementary strand, or a subsequence thereof which encodes a polypeptide fragment which has aminopeptidase activity.
- 16. The polypeptide of claim 15, which is encoded by a nucleic acid sequence which hybridizes under high stringency conditions with (i) the nucleic acid sequence of SEQ ID NO:1 or its complementary strand.
- The polypeptide of claim 15, which is obtained from an Aspergillus strain.
 - 18. The polypeptide of claim 17, which is obtained from an Aspergillus oryzae strain.
- 19. The polypeptide of claim 1, which has the following physicochemical properties: (a) a pH optimum in the range of from about pH 7.27 to about pH 10.95 determined at ambient temperature in the presence of Ala-para-nitroanilide; (ii) a temperature stability of 90% or more, relative to initial activity, at pH 7.5 determined after incubation for 20 minutes at 60°C in the absence of substrate; and (iii) an activity towards Xaa-para-nitroanilide wherein Xaa is selected

- 20. The polypeptide of claim 19, which is obtained from an Aspergillus strain,
- 5 21. The polypeptide of claim 20, which is obtained from an Aspergillus oryzae strain.
 - 22. The polypeptide of claim 1, which is encoded by the nucleic acid sequence contained in plasmid pEJG18 contained in *E. coli* NRRL B-21677.
- 23. An isolated nucleic acid sequence comprising a nucleic acid sequence which encodes the polypeptide of claim 1.
 - 24. A nucleic acid construct comprising the nucleic acid sequence of claim 23 operably linked to one or more control sequences which direct the production of the polypeptide in a suitable expression host.
 - 25. A recombinant expression vector comprising the nucleic acid construct of claim 24, a promoter, and transcriptional and translational stop signals.
 - 26. A recombinant host cell comprising the nucleic acid construct of claim 24.
 - 27. A method for producing the polypeptide of claim 1 comprising (a) cultivating a strain to produce a supernatant comprising the polypeptide; and (b) recovering the polypeptide.
 - 28. A method for producing the polypeptide comprising (a) cultivating a host cell of claim 26 under conditions suitable for production of the polypeptide; and (b) recovering the polypeptide.
 - 29. A method for producing the polypeptide of claim 1 comprising (a) cultivating a homologously recombinant cell, having incorporated therein a new transcription unit comprising a regulatory sequence, an exon, and/or a splice donor site operably linked to a second exon of an endogenous nucleic acid sequence encoding the polypeptide, under conditions conducive for production of the polypeptide; and (b) recovering the polypeptide.
- 35 30. A method for producing a mutant of a cell, which comprises disrupting or deleting a nucleic acid sequence encoding the polypeptide of claim 1 or a control sequence thereof, which results in the mutant producing less of the polypeptide than the cell.

5

- 31. The mutant produced by the method of claim 30.
- 32. A method for producing a heterologous polypeptide comprising (a) culturing the mutant of claim 31 under conditions conducive for production of the polypeptide, and (b) recovering the polypeptide.
- 33. A method for producing a hydrolysate from a proteinaceous substrate which comprises subjecting the substrate to a polypeptide of claim 1 and an endopeptidase.
- 10 34. The method of claim 33, wherein the hydrolysate is enriched in Leu, Gly, Glu, Ser, Asp, Asp, Pro, Cys, Ala, and/or Gln.
 - 35. The method of claim 3/3,/wherein the hydrolysate is enriched in Gly.
 - 36. A protein hydrolysate produced by the method of claim 33.
 - 37. The protein hydrolysate of claim 36, wherein the hydrolysate is enriched in Leu, Gly, Glu, Ser, Asp, Asn, Pro, Cys, Ala, and/or Gln.
 - 38. The protein hydrolysate of claim 36, wherein the hydrolysate is enriched in Gly.
 - 39. A food product comprising the protein hydrolysate of claim 36.
 - 40. A method for obtaining from/a proteinaceous substrate a protein hydrolysate enriched in free glutamic acid and/or peptide bound glutamic acid residues, comprising subjecting the substrate to a deamidation process and a polypeptide of claim 1.
 - 41. The method of claim 40, further comprising subjecting the substrate to one or more unspecific acting endo- and/or exo-peptidase enzymes.
 - 42. A protein hydrolysate obtained by the method of claim 41.
 - 43. A food product comprising the protein hydrolysate of claim 42.
- 44. A flavor-improving composition comprising a polypeptide of claim 1 and a suitable carrier.
 - 45. A pre-mix for a dough comprising a polypeptide of claim 1 and a baking ingredient.
